## SUBSTITUTE SPECIFICATION

### Conveying Wire

#### BACKGROUND OF THE INVENTION

##### Field of the Invention

[0001] The present invention concerns a conveying wire with disc-shaped conveying members for use in endless tube conveyor systems, the wire consisting of a number of twisted strands that each are made of thin threads or fibers, and including an outer jacket to which the said conveying members are fastened directly by injection moulding.

##### Description of the Prior Art

[0002] EP-AI -0 659 661 describes a conveying cable made of polyester fibers, and which is intended for use by transporting material in tube conveying systems, where disc-shaped conveying members of polyurethane are fastened directly on an outer sheath which also consists of polyurethane.

[0003] The use of materials with the same melting temperature (same material) for both outer jacket and the disc-shaped conveying members has the drawback that sufficient adhesion via the jacket between conveying members and the
